FIYINFOLUWA OSIFALA

Applied AI / Machine Learning — New Graduate, May 2027
Hammond, LA | 860-368-7959 | Osifalafiyin@gmail.com | linkedin.com/in/fiyinfoluwa-osifala | github.com/Fiyinosif

EDUCATION

Southeastern Louisiana University | *Hammond, LA* **Aug 2023 – May 2027**

- B.S. Computer Science, Data Science concentration — Honors Program | **GPA: 3.84**
- **Honors:** President's List, six consecutive semesters (Fall 2023 – Spring 2026); Sophomore Honors Distinction; merit-based Non-Resident Fee Waiver
- **Relevant coursework:** Machine Learning, Artificial Intelligence, Data Mining, Introduction to Computer Vision, Database Systems, Data Structures, Mathematical Statistics, Linear Algebra

TECHNICAL SKILLS

AI / ML: Retrieval-Augmented Generation (RAG), agentic / multi-agent systems, natural language processing, model evaluation & experimentation, language model APIs (Gemini, OpenRouter)

Retrieval: Hybrid retrieval (BM25 + Sentence Transformers), reciprocal rank fusion, cross-encoder reranking, Hugging Face Transformers, PyTorch, scikit-learn, LangGraph

Languages & Tools: Python, SQL, FastAPI, Pandas, NumPy, Git, GitHub

PROJECTS

Trace: Evidence-Aware Phishing Assessment | *Independent research project — github.com/Fiyinosif/trace-agentic-rag* **Sep 2026 – Present**

- Built an evidence-aware phishing assessment system using RAG (Python, FastAPI), which checks suspicious emails and SMS claim-by-claim against retrieved evidence and labels each claim supported, contradicted, or insufficiently supported
- Built the retrieval pipeline using hybrid BM25 + Sentence Transformers search, reciprocal rank fusion, and cross-encoder reranking, which surfaces the strongest evidence for each claim from a knowledge base built on FTC and NIST guidance
- Ran a controlled, paired evaluation on 200 messages (197 completed comparisons), which showed claim-level verification raised accuracy from 69.04% to 70.56% and F1 from 94.18% to 95.79%
- Audited 64 insufficiently supported claims, which found 41 (64%) were removed or qualified after verification — and that detecting weak claims does not guarantee removing them from explanations

Synapp: Interactive Body Explorer | *Team of four — React, TypeScript, Three.js; Swift / Vapor backend* **Oct 2026**

- Built backend integration for an interactive 3D body explorer using Swift / Vapor, which lets users select 1 of 11 body regions, describe symptoms, and receive source-backed guidance and answers from an AI companion grounded in a curated content library
- Built an 8-question red-flag screening flow, which routes users to 4 outcomes — emergency, urgent, more information, or educational — never diagnoses, works without the AI, and validates and rate-limits every request; demoed the working MVP to Professor Kuo-Pao Yang and a class of 22 in Survey of Programming Languages

ACE: AI-Powered Study Planner | *Team of three, LionHacks hackathon — React, Node.js/Express, Google Gemini* **Apr 2026**

- Built the survey scoring service and plan builder using Node.js / Express and Google Gemini 1.5 Flash, which extracts weekly topics from an uploaded syllabus (PDF/TXT) and turns it plus a learning-style survey into a personalised 7-day study plan that prioritises each student's weakest topics
- Built fallback logic into the plan builder, which returns a complete plan even when the AI service is rate-limited; demoed the working prototype to 16+ teams and 6 judges at LionHacks

Agora: Thread-Based Discussion Platform | *Team of four — React, TypeScript, C# / ASP.NET Core, SQL Server* **CMPS 285 — Team Lead**

- Led a team of four building Agora, a thread-based discussion platform for the CMPS 285 course instructor, using a C# / ASP.NET Core REST API (Swagger) and a React / TypeScript frontend backed by SQL Server
- Built the self-referencing discussion schema using a nullable ParentId across 10 tables, which powers threaded replies, role-based moderation (owner / admin / member), bans, invites, follows, and tag-based discovery

LEADERSHIP & EXPERIENCE

Resident Manager | *University Housing, Southeastern Louisiana University* **Jan 2025 – Present**

- Supervise and mentor 23 Resident Assistants in a fast-paced, high-accountability residential community
- Automated 1-on-1 scheduling between RAs and the Area Coordinator using Google Calendar and Apps Script, auto-generating recurring check-in slots and reminders and replacing manual coordination

Resident Assistant | *University Housing, Southeastern Louisiana University* **Jan 2024 – Dec 2024**

- Supported a community of 50+ residents as first point of contact; mediated conflicts and facilitated 11+ roommate agreements; coordinated building readiness and resident communication during flood warnings
