# FIYINFOLUWA OSIFALA

Data Engineering / Business Intelligence / Data Analytics — New Graduate, May 2027
Hammond, LA | 860-368-7959 | Osifalafiyin@gmail.com | linkedin.com/in/fiyinfoluwa-osifala | github.com/Fiyinosif

## EDUCATION

**Southeastern Louisiana University** | *Hammond, LA* **Aug 2023 – May 2027**

- B.S. Computer Science, Data Science concentration — Honors Program | **GPA: 3.84**
- **Honors:** President's List, six consecutive semesters (Fall 2023 – Spring 2026); Sophomore Honors Distinction; merit-based Non-Resident Fee Waiver
- **Relevant coursework:** Database Systems, Data Mining, Data Analytics, Machine Learning, Mathematical Statistics, Data Structures, Linear Algebra

## TECHNICAL SKILLS

**Data Engineering:** SQL Server, T-SQL, ETL pipelines, data warehousing, medallion (bronze/silver/gold) architecture, dimensional / star-schema modelling, data validation and quality checks

**Analytics & BI:** Advanced SQL (CTEs, window functions, aggregations), Power BI, Excel, segmentation, ranking, cumulative and change-over-time analysis

**Languages & Tools:** SQL, Python, Pandas, NumPy, Matplotlib, Git, GitHub

## PROJECTS

**SQL Server Data Warehouse Engineering** | *github.com/Fiyinosif/sql-data-warehouse-project* **Sep 2025 – Mar 2026**

- Built a SQL Server data warehouse using a medallion architecture (bronze / silver / gold), which transformed ~116,000 records from 6 tables across 2 source systems (CRM and ERP) into 1 clean, analytics-ready warehouse
- Built the bronze-to-silver ETL using T-SQL bulk loading with error handling, which de-duplicated customers, standardised coded values, repaired invalid dates, and recomputed sales amounts that disagreed with quantity × price
- Built the gold layer using dimensional modelling, which organised fact and dimension tables into a documented star schema analysts can query directly
- Built quality-check scripts for every layer, which validated keys, nulls, costs, date order, and sales consistency before any analysis ran

**Business Intelligence & Data Analytics** | *github.com/Fiyinosif/sql-datawarehouse-Analytics* **Mar 2026**

- Built BI analysis using advanced SQL (CTEs, window functions) on the gold layer (dim_customers, dim_products, fact_sales), which calculated 6 core metrics — total sales, quantity, average price, orders, customers, and products
- Built ranking, cumulative, and change-over-time analysis using window functions, which surfaced performance trends over time
- Built segmentation and part-to-whole analysis using SQL, which showed how each customer and product group contributes to overall sales
- Built reusable customer and product reports, which summarise performance in a format business stakeholders can act on

**Agora: Discussion Platform Database Design** | *Team of four — SQL Server, C# / ASP.NET Core* **CMPS 285 — Team Lead**

- Led a team of four building Agora, a thread-based discussion platform, designing its SQL Server database using 10 tables covering discussions, users, tags, memberships, settings, bans, invites, and follow relationships
- Built threaded discussions using a self-referencing Discussions table (ParentId NULL for head topics), which stores nested replies in one table and supports tag filtering plus a trending ranking by recency, likes, and member count

## LEADERSHIP & EXPERIENCE

**Resident Manager** | *University Housing, Southeastern Louisiana University* **Jan 2025 – Present**

- Supervise and mentor 23 Resident Assistants in a fast-paced, high-accountability residential community
- Automated 1-on-1 scheduling between RAs and the Area Coordinator using Google Calendar and Apps Script, auto-generating recurring check-in slots and reminders and replacing manual coordination

**Resident Assistant** | *University Housing, Southeastern Louisiana University* **Jan 2024 – Dec 2024**

- Supported a community of 50+ residents as first point of contact; mediated conflicts and facilitated 11+ roommate agreements; coordinated building readiness and resident communication during flood warnings
